## Abstracts

According to our (Global Info Research) latest study, the global Annulus Casing Packer market size was valued at US\$ 135 million in 2024 and is forecast to a readjusted size of USD 174 million by 2031 with a CAGR of 3.8% during review period.

Annulus Casing Packer is a downhole tool used in oil and gas wells to seal the annular space—the gap between the casing and the wellbore or between two casing strings. It is typically installed on the casing and activated after the casing is set in place, using mechanical or hydraulic force to expand a sealing element against the surrounding surface. This creates a pressure-tight seal that prevents the migration of fluids or gases between different formation layers. Annulus casing packers are essential for maintaining zonal isolation, improving cementing efficiency, and ensuring the structural integrity of the well throughout its lifecycle. They are commonly used in complex well designs, including deviated and horizontal wells, where effective annular sealing is critical to well performance and environmental protection.
