The global Anode Grade Petroleum Coke market size is expected to reach \$ 11050 million by 2029, rising at a market growth of 3.2% CAGR during the forecast period (2023-2029).

Green fuel grade coke is a solid carbon-rich material produced from oil sands or heavy crude oil. It is used as a fuel in industrial furnaces, power plants and cement kilns. Green coke is extracted from raw petroleum and then processed to remove impurities such as sulfur, metal content and moisture. The resulting product is called green coke. Green coke has a high calorific value and low ash content, making it a cost-effective fuel option compared to coal or natural gas.
