Abstracts

Anomaly detection can be termed as a process to identify anomalies such as an unusual shift in the process or event in an operation that does not follow the expected pattern or dataset. These shift in the usual pattern of the event is the major cause of a fault, defect or an error in the process.

Scope of the Report:

Anomaly detection is widely used for applications such as intrusion detection, fraud detection, system, health monitoring, and many others in a similar ecosystem. The major factor contributing to the growth of anomaly detection market is the growing number of connected devices in a network. The larger the network, more chances of traffic congestion leading to unusual patterns in the network. Anomaly detection identifies these strange patterns in network traffic that could be a major reason for intrusion detection, cyber-attacks, and fraud detection.

The global Anomaly Detection market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.
The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.
North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of Anomaly Detection.
Europe also play important roles in global market, with market size of xx million USD in 2017 and will be xx million USD in 2023, with a CAGR of xx%.
