The anorectal stapler is a medical device used in surgical procedures to treat anorectal diseases such as hemorrhoids or rectal prolapse. This is a specialized surgical suturing device designed to form a circular suture line in the anorectal area, which helps to remove excess tissue and reposition the remaining tissue in the correct position. Anorectal sutures are commonly used in minimally invasive surgical procedures, such as laparoscopic or robotic surgeries, to reduce tissue trauma and bleeding during the surgical process. This device is inserted into the anus to remove excess tissue and reposition the remaining tissue using a circular suture mechanism. The anorectal suture device comes in various sizes and configurations, depending on the specific requirements of the surgery. It is usually made of stainless steel or other biocompatible materials, designed for sterile and disposable use.
