Abstracts

The global Antenna Tuning Switch market size is expected to reach \$ 2314.3 million by 2029, rising at a market growth of 11.2% CAGR during the forecast period (2023-2029).

Global key players of Antenna Tuning Switch include Qorvo, Skyworks Solutions, Infineon Technologies AG, Maxscend Technologies, etc. The top player is Qorvo.

APAC is the largest market, has a share of 60%, followed by North America and Europe, with shares of 30% and 10%, separately.

In terms of product, Aperture Tuning and Impedance Tuning is the two main parts, with a share about 70% and 30%, separately.

In terms of products, cell phone and computers are the main applications.

Antenna Tuning Switch is composed of radio frequency switch, bias circuit and digital control circuit. The core of the design is to realize the switch of low on-state resistance R_{on} and low off-state capacitance C_{off} to minimize system loss. Therefore, the use of process characteristics is the tuning switch design. An important idea for optimization, the current mainstream process is the RF SOI process. At the same time, a single antenna tuning switch needs to use the communication frequency range of 2G/3G/4G/5G, so multiple RF switches are required. Currently, the mainstream application types are SP4T and DP4T. Antenna Tuning Switch and ordinary RF switches have RF circuits and control circuits, as well as the same performance parameters, such as power, insertion loss, isolation, harmonics and other parameters. In addition, the tuner switch also has withstand voltage, C_{off} (off-state capacitance),

Ron (on-state resistance) performance parameters. It can be said that the tuner switch is a more advanced switch than ordinary RF switches.
