Anthocyanidins are natural water-soluble natural pigments widely found in plants. They are colored back elements derived from the hydrolysis of anthocyanins. Most of the major coloring matter in fruits, vegetables and flowers is related to it.

Scope of the Report:

This report focuses on the Anthocyanins in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Anthocyanins are widely found in flowering plants (angiosperms), and their content in plants varies greatly depending on species, season, climate, and maturity. According to preliminary statistics: In 27 families, 73 species of plants contain anthocyanins, such as purple sweet potatoes, grapes, blood oranges, red cabbage, blueberries, eggplant, cherries, red berry, strawberry, mulberry, hawthorn, yak Flowers and other plants have a certain amount of tissue.

At present, the purification of anthocyanins is mostly carried out by liquid phase extraction, solid phase extraction, thin plate chromatography, column chromatography, enzymatic method, ion exchange method, macroporous resin method, membrane separation and comprehensive technical method. Among them, macroporous resin adsorption is one of the most commonly used methods for anthocyanin purification in recent years, and new purification methods such as high-speed countercurrent chromatography and electrophoresis are still in the initial stage of development.

The worldwide market for Anthocyanins is expected to grow at a CAGR of roughly 5.1% over the next five years, will reach 540 million US\$ in 2023, from 400 million US\$ in 2017, according to a new GIR (Global Info Research) study.
