Abstracts

According to our (Global Info Research) latest study, the global Anthracene market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Anthracene is a product of coal tar, which is a by-product collected from carbonization of coal. Coal tar includes about one and a half percent of anthracene. It is colorless in nature, but exhibits a blue florescence under ultraviolet light. Thus, it is used in production of red dye alizarin and other dyes. anthracene is first converted into anthroquinone; which is the product used in preparation of dye.

Coming to regional markets, the U.S. has been, historically, a dominant importer of coal tar from countries, such as, Netherlands, France and Germany. Apart from these, China and Europe are the other dominant regions, as of today. However, EU is expected to have a stagnant growth in future, corresponding to the resolution passed to ban PAH, as mentioned above.

The Global Info Research report includes an overview of the development of the Anthracene industry chain, the market status of Coating (0.99, Others), Others (0.99, Others), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Anthracene.
