## Abstracts

According to our (Global Info Research) latest study, the global Anti-aging Drugs market size was valued at US\$ 12560 million in 2025 and is forecast to a readjusted size of US\$ 26900 million by 2032 with a CAGR of 11.6% during review period.

Botox and filler treatments are into the drift. Botox encompasses purified bacteria that freezes muscles. In doing so, Botox can help minimalize the appearance of wrinkles and lines caused by facial fillers and expressions contain elements that add plumpness to areas that have thinned due to aging.

The anti-aging drugs market is propelled by several compelling factors. Most notably, the global population is aging rapidly?by 2050, the number of people aged 65 and above is projected to reach around 1.5?2.1 billion. This demographic shift fuels demand for therapies targeting age-related diseases like cardiovascular disorders, diabetes, neurodegenerative conditions, osteoporosis, and skin photoaging . Meanwhile, breakthroughs in biotechnology?spanning CRISPR, senolytics, mTOR inhibitors, NAD+ boosters, regenerative medicine, gene-editing, and AI-enabled drug discovery?are unlocking new therapeutic avenues. Rising disposable incomes, especially in emerging markets, and heightened consumer demand for wellness and aesthetic solutions further support market expansion.

Nevertheless, the sector faces significant hurdles. Chief among them are the exorbitant research and R&D costs?developing these drugs typically involves multi-year investment, expensive clinical trials, and complex regulatory approval procedures, often costing upwards of \$1?billion . Regulatory ambiguity is another barrier: aging is not formally recognized as a disease, and oversight for aging-related therapies remains

unclear, delaying approvals . Limited clinical evidence, short-term trial data, and safety concerns (e.g., off-label use, side effects, lack of biomarkers) hinder adoption
