Abstracts

The global Anti-angiogenic Ophthalmic Agent market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Anti-angiogenic ophthalmic agents act as antagonists against the vascular endothelial growth factor (VEGF). When retinal pigment cells become ischemic and dry up VEGF stimulates generation of new blood vessels by a process called neovascularization. If new blood vessels are not generated properly, leakage occurs in retina, which leads to vision loss. Angiogenesis plays an important role in chronic inflammation and fibrosis, tumor growth and vascularization of ischemic tissue.
