Abstracts

The global Anti-ANGPTL3 Antibody Drugs market size is expected to reach \$ 301 million by 2032, rising at a market growth of 9.4% CAGR during the forecast period (2026-2032).

In 2025, global Anti-ANGPTL3 Antibody Drugs production reached approximately 19.72 K Units, with an average global market price of around 7496.62 USD per Unit.

Anti-ANGPTL3 Antibody Drugs is a monoclonal antibody designed to bind and inhibit angiotensin-like protein 3 (ANGPTL3), a circulating liver-derived protein that regulates lipid metabolism by suppressing lipoprotein lipase (and related pathways). By neutralizing ANGPTL3's activity, these antibodies aim to increase triglyceride-rich lipoprotein clearance and reduce atherogenic lipids (such as LDL cholesterol and triglycerides), and are used or developed for treating severe dyslipidemias and reducing cardiovascular risk. Evolocumab is the only marketed Anti-ANGPTL3 Antibody Drugs globally. It has been approved by the US FDA for the treatment of homozygous familial hypercholesterolemia (HoFH).

Anti-ANGPTL3 antibodies are compelling because they target a well-defined, liver-driven control point in lipid metabolism that can address a persistent industry pain point: a subset of patients remain at high cardiovascular risk despite today's standard lipid-lowering options, either because of severe inherited dyslipidemias, mixed lipid abnormalities, intolerance, or residual risk that is not fully captured by LDL-centric approaches. By neutralizing ANGPTL3, these antibodies can reduce atherogenic lipoprotein burden through mechanisms that are complementary to statins and PCSK9 inhibitors, offering clinicians a differentiated tool when conventional pathways plateau and enabling a precision-medicine narrative for complex lipid phenotypes where

triglycerides, remnants, and broader dyslipidemia matter. The category is being propelled by structural drivers that have reshaped cardiometabolic drug development: rising global prevalence of obesity and diabetes, stronger emphasis on preventing costly downstream events, increasing sophistication in genetic and biomarker-enabled patient identification, and growing confidence among payers and health systems in high-value biologics that demonstrate meaningful risk reduction in well-defined populations. Anti-ANGPTL3 antibodies have credible market runway as evidence and clinical experience mature, positioning expands from rare and refractory patients toward broader high-risk segments where unmet need remains, and combination strategies with established lipid therapies become more clearly standardized, making the class an attractive long-term opportunity within the evolving cardiometabolic landscape without relying on exaggerated claims.

The upstream raw materials for Anti-ANGPTL3 Antibody Drugs mainly include ANGPTL3 recombinant protein, CHO cells, etc. Typical raw material suppliers include Thermo Fisher, Merck, Pall, etc. The downstream application is mainly for people with high blood lipids.

The production capacity of Anti-ANGPTL3 Antibody Drugs production lines varies greatly depending on the type of drug molecule, process complexity, equipment scale, and production mode. The industry gross profit margin is usually in the range of 60%-80%.
