Abstracts

Anti-blocking Agent is the chemical that reduce blocking at the surface of polymer films and other plastic articles to allow easier processing and handling. Blocking is related to slip, however, slip involves the sliding of two surfaces over each other, blocking is the adhesion of those surfaces. Our anti-blocking additives reduce surface friction allowing easier separation of polymer surfaces

Scope of the Report:

This report focuses on the Anti-blocking Agents in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Traditionally inorganic anti-blocks such as silica are added to polymer films to reduce blocking and aid separation. However, these types of additives can cause a reduction of clarity in transparent films. Our anti-blocking additives work best in combination with low levels of inorganic anti-block, which results in improved clarity.

The worldwide market for Anti-blocking Agents is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
