According to our (Global Info Research) latest study, the global Anti-CD133 Antibody market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Anti-CD133 Antibody is an antibody that specifically binds to CD133, a cell surface protein known as cluster of differentiation 133. CD133 is primarily found on stem cells, including those of the blood and epithelial tissues. This antibody is widely used in research to isolate and study stem cells, particularly in the context of cancer research, where CD133 has been associated with tumor initiating cells. It is also explored for its potential in regenerative medicine and tissue engineering due to CD133's presence on cells with regenerative potential.

The industry trend for Anti-CD133 Antibody has seen a rise as it becomes an increasingly important tool in stem cell research and oncology. The antibody's role in identifying and isolating cancer stem cells has implications for the development of novel therapeutics targeting these cells, which are believed to be responsible for tumor recurrence and resistance to treatment. Additionally, the potential for CD133 in regenerative applications is driving the demand for high-quality Anti-CD133 Antibody products. As research progresses and the functions of CD133 in various diseases are further understood, the industry trend for this antibody is expected to continue growing.
