Abstracts

According to our (Global Info Research) latest study, the global Anti-corrosion Tape market size was valued at US\$ 403 million in 2025 and is forecast to a readjusted size of US\$ 522 million by 2032 with a CAGR of 3.8% during review period.

Anti-corrosion tape refers to the adhesive tape used for anti-corrosion winding; it is mainly used for prevention of corrosion and protection of pipeline and so on. In 2025, global Anti-corrosion Tape production reached approximately 170 K MT.

The anti-corrosion tape market is supported by the continuing need to protect pipelines, fittings, joints, valves, tanks, and underground metal structures from corrosion. Oil and gas transmission, water supply, wastewater systems, petrochemical facilities, and municipal utility networks all require durable field-applied protection solutions that are easier to install than many coating alternatives.

Maintenance and rehabilitation of aging infrastructure is a major demand driver. Many pipelines and buried metal assets remain in service for long periods, and operators increasingly need practical repair systems that can be applied on site with limited downtime. Cold-applied tapes, petrolatum tapes, wax wraps, heat-shrink tapes, and viscoelastic systems are attractive because they can protect irregular shapes, welded joints, bends, and repair areas.

Demand is also influenced by stricter expectations for asset integrity, leakage prevention, safety, and lifecycle cost reduction. Buyers are paying more attention to long-term adhesion, moisture resistance, compatibility with cathodic protection, ease of application, and performance under harsh soil, marine, or industrial environments. This

favors suppliers with established pipeline references, broad product systems, and strong technical support.
