Abstracts

The global Anti-corrosion Tape market size is expected to reach \$ 522 million by 2032, rising at a market growth of 3.8% CAGR during the forecast period (2026-2032).

Anti-corrosion tape refers to the adhesive tape used for anti-corrosion winding; it is mainly used for prevention of corrosion and protection of pipeline and so on. In 2025, global Anti-corrosion Tape production reached approximately 170 K MT.

The anti-corrosion tape market is supported by the continuing need to protect pipelines, fittings, joints, valves, tanks, and underground metal structures from corrosion. Oil and gas transmission, water supply, wastewater systems, petrochemical facilities, and municipal utility networks all require durable field-applied protection solutions that are easier to install than many coating alternatives.

Maintenance and rehabilitation of aging infrastructure is a major demand driver. Many pipelines and buried metal assets remain in service for long periods, and operators increasingly need practical repair systems that can be applied on site with limited downtime. Cold-applied tapes, petrolatum tapes, wax wraps, heat-shrink tapes, and viscoelastic systems are attractive because they can protect irregular shapes, welded joints, bends, and repair areas.

Demand is also influenced by stricter expectations for asset integrity, leakage prevention, safety, and lifecycle cost reduction. Buyers are paying more attention to long-term adhesion, moisture resistance, compatibility with cathodic protection, ease of application, and performance under harsh soil, marine, or industrial environments. This favors suppliers with established pipeline references, broad product systems, and strong technical support.

This report studies the global Anti-corrosion Tape production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Anti-corrosion Tape and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
