Abstracts

The global Anti-EBO Agent market size is expected to reach $ 83.49 million by 2032, rising at a market growth of 6.2% CAGR during the forecast period (2026-2032).

In 2025, global sales volume of Anti-EBO Agent is estimated at approximately 684 tons, with the mainstream ex-factory price at around USD 78/kg. The gross margin of major manufacturers is approximately 38%?58%.

Anti-EBO Agent is a functional chemical used for metal surface treatment in semiconductor packaging. It is mainly applied to spot silver-plated lead frame, copper surface, Ni/Pd/Au surface and multi-metal plating surface. Its core function is to form an extremely thin organic protective layer or surface-regulating layer on the metal plating surface, thereby reducing the diffusion of resin component from silver paste, conductive adhesive and epoxy die attach adhesive toward the wire bonding area, bonding area or soldering area. This helps reduce silver paste bleed-out, resin contamination, wire bonding failure, poor bonding and package reliability issue. The product is not an additive for silver paste itself, but a dedicated chemical used in lead frame treatment, electroplating post-treatment and surface treatment before packaging.

Its upstream raw material mainly includes fluorinated surface-active component, silane coupling agent, non-fluorinated organic film-forming agent, solvent, stabilizer, pH regulator and compound additive. The formulation focuses on low surface energy control, metal surface adsorption stability, resistance to subsequent cleaning, and compatibility with wire bonding, solderability and electrical performance. Downstream application mainly includes integrated circuit packaging, LED packaging, power device packaging and discrete device packaging, especially packaging system using silver paste die attach, epoxy die attach adhesive and metal lead frame. packaging moves toward higher density, finer pitch and higher reliability, the impact of silver paste diffusion on yield and reliability becomes more significant, and the value of Anti-EBO Agent in lead frame electroplating post-treatment and advanced packaging material support is expected to further increase.
