## Abstracts

According to our (Global Info Research) latest study, the global Anti-electromagnetic Radiation Materials & Fabric market size was valued at USD 692.5 million in 2023 and is forecast to a readjusted size of USD 1189.8 million by 2030 with a CAGR of 8.0% during review period.

Since entering the technological age, all kinds of electronic products and electrical appliances around human beings will emit electromagnetic radiation. Electromagnetic radiation is listed as the fourth largest source of pollution by the World Health Organization and is an invisible 'killer' in human life. In order to prevent electromagnetic radiation from harming human health, anti-radiation materials are used. At present, the most convenient and effective way to prevent electromagnetic radiation is to use electromagnetic shielding. It is to use a metal mesh with good electrical conductivity and magnetic permeability to block the propagation of electromagnetic radiation through reflection and absorption effects. Generally speaking, the finer the metal mesh and the smaller the mesh, the better the shielding effect.
