Abstracts

According to our (Global Info Research) latest study, the global Anti-Fingerprint Coating for Stainless Steel market size was valued at US\$ 321 million in 2025 and is forecast to a readjusted size of US\$ 497 million by 2032 with a CAGR of 6.4% during review period.

Anti-Fingerprint Coating for Stainless Steel refers to a transparent or semi-transparent functional coating applied to stainless-steel surfaces to reduce the adhesion and visibility of fingerprints, skin oils, water stains, and other contaminants. The market mainly includes fluoropolymer, silicone, siloxane, sol-gel, nano-ceramic, acrylic, and organic-inorganic hybrid coating materials designed for stainless-steel sheets, coils, panels, and components. Decorative PVD coatings without anti-fingerprint functionality, ordinary clear paints, cleaning agents, polishing waxes, stainless-steel sheets without an anti-fingerprint coating, and coating-application equipment are excluded. Anti-fingerprint coatings generally reduce surface energy and improve hydrophobicity, oleophobicity, cleanability, abrasion resistance, and surface appearance.

The 2025 benchmark ASP is US\$7,800 per ton, global sales volume is approximately 40.000k tons, and the estimated average gross margin is approximately 37%. The upstream industry chain includes fluoropolymers, silicone resins, siloxanes, acrylic resins, silica materials, ceramic nanoparticles, solvents, water-based carriers, curing agents, additives, and functional modifiers. The midstream includes formulation, dispersion, blending, filtration, performance testing, packaging, and customized coating development. The downstream mainly covers home appliances, architectural decoration, automotive components, consumer electronics, commercial equipment, and industrial equipment.

Demand for anti-fingerprint coatings on stainless steel is supported by the growing use of brushed, polished, colored, and PVD-coated stainless-steel surfaces in products where appearance and frequent hand contact are important. These coatings can reduce visible oil marks, lower cleaning frequency, preserve the original metallic appearance, and provide additional resistance to water stains, dirt, abrasion, and corrosion.

Future development will focus on PFAS-free formulations, water-based systems, lower curing temperatures, improved abrasion resistance, stronger adhesion after bending and forming, thinner transparent films, enhanced chemical resistance, and multifunctional coatings combining anti-fingerprint, antibacterial, anti-corrosion, and easy-clean properties.
