The global Anti-Fog PET Film market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Anti-fog PET film is a type of PET (polyethylene terephthalate) film with anti-fog properties. It is widely used in various packaging applications, such as food packaging, medical packaging, and automotive glazing. The anti-fog properties of PET film are achieved through the use of special additives, such as surfactants or hydrophilic agents, which act to reduce the surface tension of the film and promote the spread and even distribution of moisture droplets, thus preventing the formation of fog.

This report studies the global Anti-Fog PET Film production, demand, key manufacturers, and key regions.
