Abstracts

The global Anti-GFP Nanobody market size is expected to reach $ 76.28 million by 2032, rising at a market growth of 8.4% CAGR during the forecast period (2026-2032).

Anti-GFP Nanobody refers to a small recombinant single-domain antibody, usually a camelid-derived VHH or sdAb, that specifically binds green fluorescent protein (GFP) and common GFP derivatives. It is mainly used as a research reagent for GFP-tagged protein capture, immunoprecipitation, co-immunoprecipitation, affinity purification, pull-down, ChIP, RIP, fluorescence signal enhancement, immunofluorescence, super-resolution imaging and live-cell or fixed-cell labeling. In this report, the market mainly includes anti-GFP VHH binding proteins, anti-GFP nanobody agarose beads, anti-GFP nanobody magnetic beads, GFP-Trap-type affinity reagents, GFP-Booster-type fluorescent nanobody probes, anti-GFP nanobody affinity gel and customized anti-GFP nanobody conjugates. The 2025 benchmark ASP is US$250 / unit, sales volume is 170.00k units, and average gross margin is 72%. The upstream industry chain includes GFP antigen, alpaca / llama immunization resources, VHH libraries, phage display platforms, recombinant expression systems, E. coli / mammalian expression media, affinity purification resins, fluorescent dyes, biotin, HRP, agarose beads, magnetic beads, linkers, buffers and stabilizers. The midstream includes nanobody discovery, sequence screening, recombinant expression, purification, conjugation, bead coupling, affinity testing, specificity validation, IP / Co-IP validation, imaging validation, lyophilization or liquid formulation, packaging and quality control. The downstream includes universities, life-science research institutes, biotechnology companies, pharmaceutical R&D labs, proteomics laboratories, imaging core facilities, cell biology labs, antibody reagent distributors and contract research organizations.

Anti-GFP Nanobody is a small but high-value life-science reagent segment. GFP

remains one of the most widely used protein tags and fluorescent reporters in molecular biology, cell biology, live-cell imaging and protein interaction studies. Compared with conventional anti-GFP IgG antibodies, anti-GFP nanobodies are much smaller, recombinant, stable and easier to conjugate to beads, dyes, enzymes or other functional groups. This makes them especially attractive for GFP-fusion protein pull-down, Co-IP, proteomics, super-resolution microscopy and signal amplification. Demand is driven by continued use of GFP-tagged cell lines, CRISPR knock-in fluorescent tags, live-cell imaging, protein interaction mapping, IP-MS workflows, high-resolution microscopy and faster magnetic bead-based sample preparation. Market growth is also supported by premium formatted products such as GFP-Trap beads, GFP-Booster fluorescent probes, affinity gels and ready-to-use IP kits. However, the market is constrained by its niche research-only nature, competition from conventional anti-GFP antibodies, availability of homemade GFP nanobody beads, academic protocols, price sensitivity in university labs and substitution by other epitope tags such as FLAG, HA, Myc, His, HaloTag and SNAP-tag. Future competition will focus on higher binding capacity beads, lower nonspecific background, broader recognition of GFP variants, brighter dye conjugates, super-resolution imaging compatibility, automation-ready magnetic formats, multiplex fluorescent nanobodies and custom conjugation services.

This report studies the global Anti-GFP Nanobody production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Anti-GFP Nanobody and provides market size (US$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Anti-GFP Nanobody that contribute to its increasing demand across many markets.

Highlights and key features of the study
Global Anti-GFP Nanobody total production and demand, 2021-2032, (K Units)
Global Anti-GFP Nanobody total production value, 2021-2032, (USD Million)
Global Anti-GFP Nanobody production by region & country, production, value, CAGR, 2021-2032, (USD Million) & (K Units), (based on production site)
Global Anti-GFP Nanobody consumption by region & country, CAGR, 2021-2032 & (K Units)
U.S. VS China: Anti-GFP Nanobody domestic production, consumption, key domestic manufacturers and share
Global Anti-GFP Nanobody production by manufacturer, production, price, value and

market share 2021-2026, (USD Million) & (K Units)
Global Anti-GFP Nanobody production by Type, production, value, CAGR, 2021-2032, (USD Million) & (K Units)
Global Anti-GFP Nanobody production by Application, production, value, CAGR, 2021-2032, (USD Million) & (K Units)

This report profiles key players in the global Anti-GFP Nanobody market based on the following parameters - company overview, production, value, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include Proteintech / ChromoTek, Proteintech / ChromoTek GFP-Booster, NanoTag Biotechnologies, NanoTag FluoTag-X4 anti-GFP, BioLegend, ABclonal Agarose Beads, Yeasen Biotechnology, AntibodySystem, Antibodies.com, MBL Life Science, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the World Anti-GFP Nanobody market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US$ Millions), volume (production, consumption) & (K Units) and average price (US$/Unit) by manufacturer, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.
