Abstracts

The global Anti-glare Three-proof Light market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Three-proof lights refer to: waterproof, dustproof and anti-corrosion. Special anti-oxidation and anti-corrosion materials and silicone sealing rings are used to achieve the protection requirements of the lamps. This lamp performs anti-corrosion, waterproof, and anti-oxidation treatment on the circuit control board. In view of the weak sealing and heat dissipation capabilities of the electrical box, the smart temperature-controlled three-proof lamp has a dedicated working circuit, which reduces the operating temperature of the power inverter and protects the strong electric isolation protection circuit. The connector is double insulated to ensure the safety and reliability of the line. According to the actual working environment of the tri-proof lamp, the surface of the lamp protective box is treated with nano-spraying, moisture-proof and anti-corrosion to prevent the entry of dust and moisture.
