Abstracts

According to our (Global Info Research) latest study, the global Anti-Gravity Treadmill market size was valued at US\$ 24.31 million in 2025 and is forecast to a readjusted size of US\$ 39.44 million by 2032 with a CAGR of 7.0% during review period.

In 2025, global Anti-Gravity Treadmill production reached approximately 450 units, with an average global market price of around 52,500 US\$/unit.

An Anti-Gravity Treadmill is a rehabilitation and training treadmill that uses body-weight support technology to reduce the effective weight borne by the user during walking or running. The most common technical route is differential air pressure, in which the lower body is enclosed in an air chamber and upward air pressure partially unloads the user's body weight, usually allowing adjustable weight support from about 20% to 100% of body weight. This enables patients, athletes and elderly users to perform gait training, post-surgery rehabilitation, neurological recovery, weight-bearing transition and low-impact aerobic exercise with less stress on joints, muscles, tendons and bones.

The average single-line production capacity of Anti-Gravity Treadmill is 85 units, the average gross profit margin was 38.1%.

The Anti-Gravity Treadmill industry chain includes upstream suppliers of treadmill platforms, motors, belts, frames, air-pressure chambers, compressors, sealing fabrics, sensors, control systems and software. Midstream manufacturers integrate the treadmill, body-weight support system, pressure control, safety design and clinical-use functions. Downstream customers mainly include rehabilitation hospitals, orthopedic clinics, sports medicine centers, physiotherapy centers, professional sports teams,

elderly-care institutions and high-end fitness facilities.

The cost structure is mainly composed of the treadmill platform and mechanical frame, accounting for about 25%-30%; the body-weight support and air-pressure system, about 20%-25%; electronics, sensors, display and software, about 15%-20%; manufacturing, assembly, testing and certification, about 10%-15%; and sales, installation, training and after-sales service, about 15%-20%.

Demand is driven by rehabilitation medicine, sports injury recovery, orthopedic surgery, neurological rehabilitation and active aging. Anti-Gravity Treadmills help reduce joint load and support earlier gait training, creating opportunities in hospitals, sports medicine centers, private rehabilitation clinics and elderly-care markets. Future growth opportunities include compact models, lower-cost systems, smart rehabilitation software and gait data monitoring.
