Anti-IgG Antibody is a type of antibody that specifically binds to IgG, which is one of the major classes of antibodies produced by the immune system. IgG antibodies are involved in immune responses by recognizing and neutralizing foreign substances, such as bacteria and viruses. Anti-IgG antibodies are used in research and diagnostic applications to detect the presence of IgG in samples which can indicate an immune response or the presence of certain diseases. They are also used in therapeutics, such as immune globulins, which are used to treat conditions like primary immunodeficiency and certain autoimmune diseases.

The industry trend for Anti-IgG Antibody has experienced steady growth due to its essential role in immunology research and diagnostics. The antibody is crucial for developing and validating assays that detect and measure IgG antibodies, which are important biomarkers for monitoring immune status and disease progression. Additionally, the use of Anti-IgG the development of therapeutics, such as passive immunotherapy and targeted drug delivery systems, is expected to drive the demand for this product.
