Abstracts

Anti-infective agents are drugs used for the purpose of killing and/or suppressing the infection causing organisms from invading the host by means of its replication or releasing variety of toxins into the host. Infection causing micro-organisms include bacteria, viruses, fungi, viroids, and macro parasites. Infections thus caused can be classified depending on type of organism causing the infection and symptoms and medical signs shown by the host.

Scope of the Report:

This report focuses on the Anti-infective Agents in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

North America was one of the dominated countries in 2015 with a revenue generation of over USD 26.3 billion. The presence of sophisticated healthcare infrastructure and high awareness amongst the end-users such as clinicians and healthcare professionals in this region are estimated to be the key factors contributing to this large share. Moreover, in this region, the high purchasing power of expensive drugs and the presence of favorable reimbursement policies are the drivers projected to accentuate the growth of the anti-infective agents market.

Asia-Pacific is expected to witness significant growth over the forecast period owing to the presence of generics companies, the rising economic stability, and the increasing level of disposable income. In addition, the growing geriatric population base coupled with the increased susceptibility to infections is expected to provide a potential growth platform to this industry.

The worldwide market for Anti-infective Agents is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
