Abstracts

Anti-inflammatory agents block certain substances in the body that cause inflammation. They are used to treat many different conditions such as treat migraines, headaches, rheumatic arthritis, sprains, and menstrual pain. Furthermore, some anti-inflammatory agents such as celecoxib and ibuprofen are being studied for the prevention and treatment of cancer. In addition, they can provide faster relief as compared to other drugs. They are capable of lowering the levels of prostaglandins and the chemicals responsible for inflammation, thereby reducing pain and swelling. Anti-inflammatory drugs usually target the anti-inflammatory mediators or enzymes. These drugs are often used in combination of other drugs. Inflammation is the most prevalent treatable symptom among many immune and respiratory diseases.

According to our (Global Info Research) latest study, the global Anti-inflammatory Agents market size was valued at US\$ 100940 million in 2023 and is forecast to a readjusted size of USD 132390 million by 2030 with a CAGR of 3.9% during review period.

The growth of the global anti-inflammatory agents market has been driven by factors such as increase in prevalence of autoimmune & respiratory conditions, new drugs in pipeline, and surge in adoption of anti-inflammatory drugs. Furthermore, the demand for anti-inflammatory drugs has been increasing exponentially, owing to the emergence of anti-inflammatory biologics that are more targeted, effective, and with lesser side effects as compared to conventional drugs. Moreover, rise in awareness of anti-inflammatory therapeutics and attractive government initiatives toward the treatment of inflammation with nonsteroidal anti-inflammatory drugs in Asia-Pacific and LAMEA are expected to drive the market growth during the analysis period. However, factors such as side

effects of anti-inflammatory drugs and patent expiry issues of blockbuster drugs (such as Remicade) impede the market growth.
