Skin inflammation, which can appear raised, red, and often bumpy, is a symptom of a deeper problem. The cause could be an allergic reaction (such as to food ingested or products used), the presence of bacteria or infection, extended sun exposure without protection, or even an immune system dysfunction like psoriasis. The irritation can present as blistering, itchiness, and swelling of the skin. Topical products can help soothe the skin, but it's imperative that the underlying causes are addressed in order to eliminate the inflammation.

The best ingredients for inflamed skin can even block the enzymes that contribute to inflammation, soothing the existing irritation and preventing further inflammation. Treating this also helps repair the skin's compromised barrier, helping the microbiome protect the skin from other conditions and concerns.
