According to our (Global Info Research) latest study, the global Anti-iNOS Antibody market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Anti-iNOS Antibody is a monoclonal or polyclonal antibody that targets inducible nitric oxide synthase (iNOS), an enzyme involved in the production of nitric oxide (NO), which plays a role in various biological processes including inflammation, immune response, and cell signaling. This antibody is used in research to detect and study the expression of iNOS in tissue samples and cell cultures, providing insights into the activation of NO signaling pathways and the associated pathological conditions such as inflammation and cancer. It is also used in diagnostic tests to identify diseases where iNOS expression is dysregulated.

The industry trend for Anti-iNOS Antibody has seen a rise as research into the role of nitric oxide and iNOS in health and disease continues to expand. The antibody is crucial for investigators studying the molecular mechanisms of inflammation, cancer, and other diseases where iNOS is implicated. Additionally, the potential therapeutic applications of modulating iNOS activity, such as in the treatment of cardiovascular diseases and cancer, are driving the demand for research tools like Anti-iNOS Antibody. As understanding of iNOS's multifaceted role in health and disease improves, the industry trend for this antibody is expected to continue growing.
