The global Anti-itch Cream for Children market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Children's anti-itch creams need to be based on specific conditions in order to determine which is good. If the itch is caused by a mosquito bite, the treatment includes menthol cream, which can help to stop the itch. If there is an infection, the medicine has antibiotics, such as erythromycin ointment, which can reduce inflammation and sterilization. If it is caused by allergies, clinical use includes anti-allergy medication such as dermatoprost ointment. The irritation caused to children's skin is less. If eczema is the cause, common medications include pimecrolimus cream etc. Because of the delicate skin of children, non-hormonal or weak hormonal ointments are preferred.
