Abstracts

According to our (Global Info Research) latest study, the global Anti-leakage Takeaway Box market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

With the rapid development of the delivery ordering industry and the sudden increase in demand for food boxes, the commonly used delivery boxes have evolved from polyethylene lunch boxes to PE material lunch boxes. In order to save energy and protect the environment, paper lunch boxes have been used in the market. However, the current paper lunch boxes have poor insulation performance. Moreover, due to the unique nature of Chinese cuisine, dishes often contain oil and water as well as high cooking temperatures, resulting in lunch boxes often becoming soft, deformed, and leaking oil. Not conducive to the widespread promotion and application of paper lunch boxes, coupled with the fact that plastic lunch boxes are relatively sturdy and easy to stack during transportation. Due to the limited thermal insulation and compressive strength of existing lunch boxes, it is easy to cause problems such as bulging and lodging when stacking lunch boxes, which cannot meet the fast-paced demand for delivery lunch boxes and meet the growing product demand of customers. Currently, there is an urgent need for a paper lunch box with a novel structure to address the aforementioned issues and adapt to the rapidly developing demand for takeout packaging.

The anti-leakage takeaway box is made of PE-coated cardboard. The paper comes from renewable plant fibers. It is a square-bottom lunch box that can hold noodles, rice, and curry biscuits.
