According to our (Global Info Research) latest study, the global Anti-Mold Isolation Powder market size was valued at US\$ 173 million in 2025 and is forecast to a readjusted size of US\$ 220 million by 2032 with a CAGR of 3.5% during review period.

In 2025, the global production of anti-mold isolation powder was approximately 27,300 tons, with an average selling price of approximately US\$6,150 per ton. The scale of single-line production capacity varies depending on the production process and investment scale, with an average gross profit margin of approximately 15%-25%. Anti-mold isolation powder is an industrial auxiliary material primarily used to prevent objects from sticking, scratching, and molding during storage or transportation. It typically exists in powder form and can form an isolation layer, thus providing physical separation and anti-mold protection.

The upstream core raw materials for anti-mold isolation powder include anti-mold active ingredients, inorganic carriers (such as silicon dioxide, calcium carbonate, and talc), and surface treatment agents; its downstream applications are directly in end-use industries with specific requirements for anti-mold and antibacterial properties, mainly including plastic products, rubber products, glass, textiles, and building materials and sealing materials (such as silicone sealants and wallpaper), where it is added to materials to prevent mold growth, degradation, and aesthetic damage caused by microorganisms.

Anti-mold isolation powder, as an important functional material, is widely used in various industries such as textiles, construction, food packaging, and electronics. With the impact of global climate change and humidity fluctuations, the demand for anti-mold products is constantly rising, driving the rapid development of this market. The market

demand for anti-mold isolation powder is particularly prominent in regions where humid environments are common. As people's awareness of health and environmental protection increases, consumer demand for green and environmentally friendly anti-mold products is also growing, further promoting the research and application of inorganic and organic anti-mold isolation powders.

In terms of application areas, the textile industry remains the largest market for anti-mold isolation powder, especially in the anti-mold and antibacterial treatment of clothing and home furnishings. In addition, the demand for anti-mold products in the construction industry is gradually increasing, particularly in moisture-proof and anti-mold coatings and building materials, where the application of anti-mold isolation powder is becoming more widespread. With technological advancements, the effectiveness, durability, and environmental friendliness of anti-mold isolation powder are gradually improving, which is unlocking its potential for applications in electronics, food packaging, and other fields.

Overall, the anti-mold isolation powder market has broad prospects, and with continuous technological innovation and changing consumer demands, it is expected to continue growing in the coming years. Major companies are strengthening product research and development and market expansion to meet the diverse needs of consumers for efficient, environmentally friendly, and anti-mold materials.
