According to our (Global Info Research) latest study, the global Anti-Needle-Puncture Positive Pressure Intravenous Catheter market size was valued at US\$ 589 million in 2025 and is forecast to a readjusted size of US\$ 787 million by 2032 with a CAGR of 4.2% during review period.

In 2025, the global production of needle-proof positive pressure intravenous catheters reached 137.8675 million units, with an average selling price of US\$4.15 per unit. The global annual production capacity of needle-proof positive pressure intravenous catheters is approximately 175 million units, with a gross profit margin of approximately 17.5%. Needle-proof positive pressure intravenous catheters are intravenous catheter systems used in medical settings. Their design aims to minimize the risk of needle pricks during puncture and placement, while providing a safer and more comfortable intravenous puncture experience through positive pressure supply and a sealing structure. They are typically used in scenarios requiring long-term indwelling intravenous catheters, such as intravenous infusions, chemotherapy, and blood collection. The upstream of the needle-proof positive pressure intravenous catheter industry chain includes stainless steel needles, catheter materials, and disposable safety needle caps; the midstream consists of needle-proof positive pressure intravenous catheter manufacturers; and the downstream is mainly used in hospitals and clinics.
