## Abstracts

According to our (Global Info Research) latest study, the global Anti-Nuclear Radiation Drug market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Nuclear radiation refers to the various microscopic particles and electromagnetic radiation or energy released during nuclear reactions such as fission and decay of atomic nuclei. This kind of radioactive material exists in large quantities in nuclear explosions, nuclear leakage accidents and nuclear waste. Anti-nuclear radiation drugs commonly used in clinical practice include thiol drugs, cytokine drugs, hormone drugs, metal complexing agents, and Chinese herbal medicines.

The development prospect of anti-nuclear radiation medicine depends to a large extent on the development trend of global nuclear energy. If the global nuclear power generation continues to increase, the market demand for nuclear radiation protection drugs may increase accordingly.

At present, the global anti-nuclear radiation drug market has been researched and developed by some major pharmaceutical companies and biotechnology companies. The main types of anti-nuclear radiation drugs include stable iodine, Prussian blue, zinc lozenges, complement activators, antibiotics, anti-radiation drugs, etc. Among them, stable iodine and Prussian blue are the most commonly used drugs for the prevention and treatment of acute radiation exposure.

Although the market size of nuclear radiation protection drugs is relatively small, it is expected to maintain rapid growth in the coming years. This is primarily attributable to

heightened concern over nuclear radiation incidents and increased need for prevention and treatment of radiation exposure.

However, the development and application of anti-nuclear radiation drugs still face some challenges. For example, anti-nuclear radiation drugs currently on the market are mainly aimed at a specific type or dose of radiation, rather than being widely applicable. In addition, due to the rarity of nuclear radiation incidents, there are certain difficulties in clinical trials and applications of these drugs.

In general, the development prospects of anti-nuclear radiation drugs seem bright, but continued in-depth research and development are needed to overcome existing technical and market challenges.

The Global Info Research report includes an overview of the development of the Anti-Nuclear Radiation Drug industry chain, the market status of Online Sales (Potassium Iodide (KI), Prussian Blue), Offline Sales (Potassium Iodide (KI), Prussian Blue), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Anti-Nuclear Radiation Drug.
