According to our (Global Info Research) latest study, the global Anti-radiation Drugs market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Anti-radiation drugs offer protection against radiation exposure. These drugs include KI, Prussian Blue, and DTPA (Diethylenetriamine pentaacetate). Anti-radiation medicines help block the absorption and subsequent concentration of radioactive iodine in the thyroid gland. KI must be consumed before or shortly after exposure to radioactive iodine for better results. It is effective only against radioactive iodine and not against other types of radiation. Oxidation of ferrous ferrocyanide salts produces Prussian blue that is used for the treatment of thallium poisoning or radioactive cesium poisoning.

The Global Info Research report includes an overview of the development of the Anti-radiation Drugs industry chain, the market status of Acute Radiation Syndrome (ARS) (Potassium Iodide (KI), Prussian Blue), Cancer Treatment (Potassium Iodide (KI), Prussian Blue), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Anti-radiation Drugs.

Regionally, the report analyzes the Anti-radiation Drugs markets in key regions.
