Abstracts

The global Anti-radiation Drugs market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Anti-radiation drugs offer protection against radiation exposure. These drugs include KI, Prussian Blue, and DTPA (Diethylenetriamine pentaacetate). Anti-radiation medicines help block the absorption and subsequent concentration of radioactive iodine in the thyroid gland. KI must be consumed before or shortly after exposure to radioactive iodine for better results. It is effective only against radioactive iodine and not against other types of radiation. Oxidation of ferrous ferrocyanide salts produces Prussian blue that is used for the treatment of thallium poisoning or radioactive cesium poisoning.

This report studies the global Anti-radiation Drugs production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Anti-radiation Drugs, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
