According to our (Global Info Research) latest study, the global Anti-Recording Equipment market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

The driving factors for anti-recording equipment mainly include the following points:

Protect privacy and business secrets: In business negotiations, meetings, and other occasions, criminals sometimes use recording equipment to record, leaking business secrets or personal privacy. Anti-recording equipment can effectively protect this information from being leaked.

Prevent malicious recordings: In some cases, malicious people may make recordings to threaten or spread malicious information. Anti-recording devices can prevent this from happening.

Meet compliance requirements: In some industries, such as finance, law, etc., compliance requirements are very strict and there are extremely high requirements for the confidentiality of conversation content. Anti-recording equipment can meet the compliance needs of these industries.

Technological progress: With the development of science and technology, anti-recording technology is also constantly improving, and more concealed and difficult-to-detect anti-recording equipment has emerged. For example, products such as Bluetooth audio recording jammers are designed to be disguised as Bluetooth speakers, making them less likely to be noticed by recorders.
