Anti-scratch film for cars, also known as paint protection film (PPF) or clear bra, is a thin, transparent film applied to the exterior surfaces of vehicles to protect the paintwork from scratches, stone chips, and other minor abrasions. It is commonly used on areas such as the hood, fenders, bumpers, mirrors, and door edges, where the paint is most vulnerable to damage. The film is made of a durable and flexible thermoplastic material, typically polyurethane or polyethylene, that is resistant to impact, UV radiation, and chemicals. It is engineered to absorb minor impacts and prevent scratches or chips from reaching the underlying paint surface.
