The global Anti-smashing Radar market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Anti-smashing radar is a safety device commonly used in automatic door system. It is designed to detect obstacles or obstacles in the path of mobile doors and prevent doors from closing or opening when obstacles are detected. Anti-smashing radar usually uses microwave or infrared technology to transmit signals and detect the presence of objects in the detection area. If an object is detected, the radar sends a signal to the door control system to prevent the door from closing or opening, and can also activate an alarm or warning signal to warn people near the door. Anti-smashing radar is an important safety function, which can help prevent injuries and accidents caused by automatic doors closing on people or objects on the path.
