The global Anti Static Bag for Electronics market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Anti-static bags for electronics are specialized packaging materials used to protect electronic components, devices, and other sensitive equipment from static electricity during storage, shipping, and handling. These bags are made from materials that have low electrostatic discharge (ESD) properties and are designed to prevent the buildup of static electricity on the surface of the bag and its contents. Anti-static bags are commonly used to store and transport electronic components such as integrated circuits (ICs), printed circuit boards (PCBs), computer chips, and other sensitive devices. They are also used to protect sensitive electronic equipment during shipping and handling.
