Abstracts

According to our (Global Info Research) latest study, the global Anti-static Floor Coating market size was valued at US\$ 3408 million in 2024 and is forecast to a readjusted size of USD 5065 million by 2031 with a CAGR of 5.9% during review period.

Anti-static floor coating is a special new material with conductive fillers added to epoxy resin. Before the floor is cured, the base material and the conductive filler exist independently and are not continuous with each other, and are in an insulating state. After the floor is cured and dried, the solvent evaporates, the base resin and the conductive filler are mixed and cured, and they are tightly connected to each other, thus generating conductivity. If a conductive copper mesh is laid in the floor structure, the static conductive function of the floor can be further enhanced.
