According to our (Global Info Research) latest study, the global Anti-Surge Control Valve market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Anti-Surge Control Valves, which detect when the compression phase of the process is approaching a surge and subsequently take action to reverse the movement of the operating point towards the surge line. This reduces the boost chamber pressure and increases the flow through the compressor, thus achieving stable operating conditions. This is usually achieved by opening the control valve in the circulation line and returning the discharge gas to the compressor inlet via the suction cooler. The resulting increase in compressor inlet volume flow moves the operating point away from the surge.
