Abstracts

The global Anti-Tremor Wristband market size is expected to reach $ 136 million by 2032, rising at a market growth of 16.1% CAGR during the forecast period (2026-2032).

Anti-tremor wristband refers to non-invasive wearable systems designed to reduce, suppress, or functionally compensate for pathological tremor of the hand and upper limb, with the study scope centered on wrist-worn devices and closely integrated hand, wrist, or forearm wearable systems. These products use peripheral neurostimulation, active mechanical stabilization, passive damping, tuned mass absorption, gyroscopic stabilization, or customized orthotic mechanisms to reduce tremor amplitude or improve upper-limb motor control during activities of daily living. Advanced electronic products may incorporate accelerometers, gyroscopes, tremor-frequency sensing, adaptive algorithms, and personalized stimulation parameters to identify individual tremor characteristics and adjust therapy or stabilization accordingly. The principal clinical application is essential tremor, while selected products are also used for action, postural, or kinetic tremor associated with Parkinson's disease and other pathological upper-limb tremor disorders. In 2025, the global anti-tremor wristband market will have a total sales volume of 8,300 units, with an average selling price of approximately US$5,600 per unit, and an overall industry gross margin ranging from 45% to 60%.
