Anti Vibration Marine Engine Mounts are devices that are specifically designed for use in marine vessels to reduce vibrations and dampen shocks. These mounts are designed to absorb and isolate vibrations caused by the engine, propulsion system, waves, and other sources, providing a smoother and more comfortable ride for passengers and reducing stress on the vessel's structure and components.

Marine environments present unique challenges due to the constant movement of the vessel on water, as well as the mechanical vibrations generated by the engine and propulsion system. These vibrations can transmit through the hull and superstructure, causing discomfort to passengers, affecting the performance of onboard equipment, and potentially leading to premature wear and damage to critical components. Anti-vibration mounts used in marine applications are typically made of materials that are resistant to corrosion and can withstand the harsh conditions of the marine environment. These mounts are designed to minimize the transmission of vibrations from the engine, propellers, and other sources to other components, such as the hull, deck, and internal fixtures. Marine anti-vibration mounts are crucial in ensuring a smooth and comfortable ride for passengers, reducing stress on the vessel's structure, and

protecting sensitive equipment onboard. They are an essential part of marine vessel design and help maintain the performance, safety, and longevity of the vessel in demanding marine environments.
