'Anti-Water Glass Bead' can be defined in English as a type of glass bead that is specifically designed to resist the absorption or penetration of water. These beads are often used in various applications where water resistance is crucial, such as in automotive coatings, road markings, or any other surface treatment where durability and water-repellent properties are required. The anti-water property of these beads is achieved through their surface treatment or chemical composition, which makes them less susceptible to moisture penetration and ensures that they maintain their integrity and functionality even in wet conditions.
