According to our (Global Info Research) latest study, the global Antiangiogenic Drugs market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Anti-angiogenic drugs are medications designed to inhibit angiogenesis, which is the process of forming new blood vessels. Anti-angiogenic drugs work by targeting specific molecular pathways involved in angiogenesis. By inhibiting these pathways, they prevent the formation of new blood vessels around tumors, thereby depriving them of the nutrients and oxygen they need to grow. These drugs can be used alone or in combination with other cancer therapies such as chemotherapy or radiation therapy.
