Antibacterial and Anti-fingerprint Stainless Steel Coating is a high-performance composite coating formed on the surface of stainless steel through nanotechnology, which has antibacterial, antifouling and corrosion-resistant properties. The coating usually uses the sol-gel method or vacuum coating process to build a dense protective layer on the surface of the substrate, and adds antibacterial ingredients such as silver and copper, so that its inhibition rate against common pathogens such as *Escherichia coli* and *Staphylococcus aureus* exceeds 99.9%. At the same time, its hydrophobic and oleophobic properties can effectively reduce the adhesion of fingerprints and stains, making it easy to clean and maintain. The coating also has excellent wear resistance and chemical resistance, meeting the comprehensive needs of the high-end market for hygiene, beauty and durability.
