Antibiotics for Dogs and Cats are veterinary pharmaceutical drugs specifically formulated to treat and prevent bacterial infections in companion animals such as dogs and cats, targeting conditions affecting the skin, respiratory tract, urinary system, gastrointestinal system, dental structures, and post-surgical wounds, while ensuring appropriate dosing, safety, and palatability under veterinary prescription control to minimize adverse effects and antimicrobial resistance risks.

The Antibiotics For Dogs And Cats industry chain consists of upstream pharmaceutical API manufacturers producing active ingredients such as penicillins, cephalosporins, fluoroquinolones, and macrolides through fermentation or chemical synthesis along with excipients, stabilizers, and flavoring agents, while midstream veterinary pharmaceutical companies formulate, process, and package antibiotics into tablets, suspensions, injectables, and topical products under strict veterinary GMP and regulatory compliance systems, and downstream distribution channels including veterinary hospitals, clinics, pet pharmacies, online veterinary platforms, and animal shelters deliver these products to pet owners for treatment of bacterial infections, post-surgical care, and preventive infection management in companion animals globally.
