Abstracts

The global Antibodies for Research market size is expected to reach \$ 2097.5 million by 2029, rising at a market growth of 4.7% CAGR during the forecast period (2023-2029).

Rising R&D activities in neurological, oncology, and stem cell research, increasing prevalence of cancer and infectious diseases, growing demand for antibodies, and increasing regulation across the biopharmaceutical industry are the key factors driving the research-based antibodies market revenue.

Research antibodies are divided into monoclonal antibodies and polyclonal antibodies. Monoclonal antibodies, also called mAbs, are laboratory-made antibodies that bind to specific targets in the body, such as antigens on the surface of cancer cells. There are several types of monoclonal antibodies, and each mAb is designed to bind a single antigen. They can be used alone or in combination with other drugs to deliver drugs, toxins or radioactive substances directly to cancer cells.

Polyclonal antibody, also known as 'polyclonal antibody' (Polyclonal Antibody), is an antibody mixture containing multiple types of antibodies. The 'poly' in its name refers to the mixture of antibodies produced by different types of plasma cells.

This report studies the global Antibodies for Research production, demand, key manufacturers, and key regions.
