## Abstracts

The global Antibody Based Therapeutics market size is expected to reach \$ 363690 million by 2029, rising at a market growth of 10.5% CAGR during the forecast period (2023-2029).

The Therapeutic Antibodies Drug Market is driven by the remarkable potential of therapeutic antibodies to treat a diverse array of diseases, from cancer and autoimmune disorders to infectious diseases. Monoclonal antibodies have gained prominence as highly targeted and effective therapeutic agents that can modulate the immune system, neutralize pathogens, and inhibit disease-associated proteins. As precision medicine and biopharmaceutical innovations continue to advance, the demand for therapeutic antibodies grows. Innovations in antibody design, engineering, and manufacturing technologies further contribute to market expansion. Nevertheless, a significant challenge for this market is the need to address high production costs, optimize therapeutic antibody development processes, and navigate complex regulatory pathways while ensuring accessibility and affordability for patients. Overcoming manufacturing complexities, managing research and development costs, and addressing regulatory standards are ongoing challenges. Additionally, the market faces competition from small molecules and other biologic therapies, necessitating continuous research and development efforts to unlock the full therapeutic potential of therapeutic antibodies. Striking a balance between providing safe, effective, and accessible therapeutic antibody drugs while addressing scientific and regulatory challenges is essential for the continued growth of the Therapeutic Antibodies Drug Market.

Therapeutic antibodies are drugs that use antibodies, one of the main players in our immune system inherent in our body. By making use of the specificity by which each antibody recognizes only one antigen, pinpointed attacks on specific antigens are

possible.
