Abstracts

The main idea of antibody library technology is to clone all the antibody variable region genes of an animal into plasmids or phage, and use different antigens to screen out clones carrying specific antibody genes to obtain corresponding specific antibodies.

SCOPE OF THE REPORT:

This report studies the Antibody Library Technologies market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Antibody Library Technologies market by product type and applications/end industries.

Demand for antibody library technologies is expected to surge, as the arrival of advanced antibodies and their display technologies continue to reduce complexities of life science and biotechnology research. Some of the latest antibody library design and selection methods enable easy identification of any MAB with any specificity, which is why pharmaceutical companies are increasingly making use of such technologies in their facilities.

Phage display is now one of the key drug discovery technologies and unlike in vivo technologies, phage display is not limited by immunological tolerance and toxicity to an animal. Thus, the popularity of phage display as a drug discovery tool is further increasing. The Phage Display segment is the largest segment among the four technology segments in the global antibody library technologies market and accounted for a little over 55% market share in 2017.

The global Antibody Library Technologies market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of Antibody Library Technologies.
