According to our (Global Info Research) latest study, the global Anticoagulant and Non-Anticoagulant Rodenticides market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Anticoagulant and non-anticoagulant rodenticides are chemicals used to eliminate rodent pests. Anticoagulant rodenticides inhibit the activity of thrombin in rodent pests, causing the pests to be unable to coagulate and stop bleeding normally and eventually die. Non-anticoagulant rodenticides achieve rodent control effects by affecting the nervous system or metabolic pathways of pests and act more rapidly.

Anticoagulant rodenticides require continuous ingestion for several days to exert their killing effect, and it takes a longer time to control pests. When using anticoagulant and non-anticoagulant rodenticides, it is important to follow instructions to ensure safe use and maximum pest control.
