Abstracts

Anticoagulants, commonly referred to as blood thinners, are chemical substances that prevent or reduce coagulation of blood, prolonging the clotting time. Some of them occur naturally in blood-eating animals such as leeches and mosquitoes, where they help keep the bite area unclotted long enough for the animal to obtain some blood. As a class of medications, anticoagulants are used in therapy for thrombotic disorders. Oral anticoagulants (OACs) are taken by many people in pill or tablet form, and various intravenous anticoagulant dosage forms are used in hospitals. Some anticoagulants are used in medical equipment, such as test tubes, blood transfusion bags, and dialysis equipment.

Scope of the Report:

This report studies the Anticoagulation Therapy market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Anticoagulation Therapy market by product type and applications/end industries.

Novel Oral Anticoagulants (NOACs) have major pharmacologic benefits over warfarin, which is a vitamin K antagonist, together with the rapid onset/offset of action, few drug interactions and predictable pharmacokinetics. Warfarin has a limited therapeutic window that can be strike by factors such as diet and enabling patients on warfarin to monitor their INR regularly. Novel oral anticoagulant (NOACs) is the top performing segment as an alternative to anticoagulant. Increasing number of patients with lifelong medical aid therapy, growing prevalence of blood vessel thromboembolism, arrhythmia, and stroke, acceptance of NOAC's is raising revenue in the market, rising outpatient anticoagulation therapy, increasing number of pipeline products under clinical trials and

rising heparin trade spurring the growth of anticoagulation therapy market. However, high cost of developing drugs and risk of malfunctions like increased bleeding is main issue with newer agents are expected to impact the target market negatively. North America accounted for the largest market share of anticoagulation therapy market owing to rising number of the hospital associated clinics and high healthcare expenditure. Europe is expected to grow at the higher rate and generate quite the substantial amount of revenue owing to rising incidence of venous thromboembolism, atrial fibrillation, and stroke. On the other hand, APAC is the fastest growing region, registering the CAGR of 8.1% over the forecast period due to long-term administration and high volume of recurring sales of anticoagulation drugs for long lasting medical aid therapy.

The global Anticoagulation Therapy market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of Anticoagulation Therapy.
